

TeamLab announces the first online HTML5-based word processor

CeBIT Convention Center, Room 3B, March 7, 15:30 – Ascensio System SIA introduces the beta version of the first full-fledged HTML5-based TeamLab Document Editor.

Ascensio System SIA, the developer of IT solutions for corporate use, will reveal details on TeamLab Document Editor, a part of the web office for business collaboration, project, and customer relations management. With the unique technology applied and functionality significantly enhanced TeamLab offers a full-fledged feature-set to maintain document procedures online at a completely new level not yet reached by other manufacturers in the segment.

The cutting edge technology, that drives TeamLab Document Editor, differs from all the other existing counterparts, getting use of all the HTML5 features. It supplies the tool with an array of competitive strengths making it a proper alternative to desktop word processors in terms of functional variety. In contrast to all the existing online word processors TeamLab Document Editor provides...

- the input that is always identical to the output: a processed file keeps the same style, paragraphs, symbol and line spacing etc. while displaying in any browser on any OS as well as while importing or printing;
- a proper choice of options for table processing, line spacing, multi-level numbering, text and heading styles;
- possibilities for hassle-free processing of multi-page reports, business or financial documentation precisely complying with all the corresponding standards;
- no language barriers as the number of fonts is maximum with hieroglyphs included.

Pursuing a goal to **erase boundaries between desktop and online word processors**, TeamLab Document Editor combines the convenience and mobility of web applications with the multifunctionality of conventional package doc processors like Microsoft Office Word or OpenOffice Writer.

About TeamLab

TeamLab is a free online service for business collaboration, document, project and customer relationship management that integrates a number of online tools helping employees to organize business tasks, exchange news, manage corporate documents and communicate in real time.

About Company

Ascensio System SIA is the developer of IT solutions for personal and corporate use, founded in 2009 with the idea to make any teamwork and small business activities efficient. Currently, the company's flagship project is TeamLab. Its development is led by a multi-national team of ambitious and highly qualified experts in web application design and implementation.

About TeamLab Development

TeamLab has emerged as a result of a successful project for company's internal use. This demand for tools for corporate communication and task management gave origin to the first two modules of the corporate solution: Community and Projects. As soon as Ascensio team members made sure that this type of a corporate portal really contributed to the company's performance improvement, TeamLab was launched as a free SaaS service available for everyone.

Later on the company's R&D work has revealed a demand in proper document management tools and CRM systems. In 2011 the corresponding modules were already integrated into TeamLab, turning it into a multifunctional web office suitable for an entire team of any activity scope.

Almost since the project start TeamLab has also offered an open source deployment version for developers and experienced users who wish to install and configure the platform manually on their own server.
